Cubieboard0909 Simple
Customization For Core-Board Application

Cubieboard0909 is mainly targeted at mini-pc development board, but also consider some of core-board applications. What's well known is that 96 extended pins with lots of applied circuit interfaces. Here, I would like to introduce some tips in core-board applications.

1、 You can power the Cubieboard0909 via 4-pin 2.0mm pitch dual in-line connector from base-board.

2、 The IR receiver module can be extended to anywhere you want via 3-pin 2.0mm pitch single in-line connector.

3、 The USB HOST can be extended to anywhere you want via 8-pin 2.0mm pitch dual in-line connector.

4、 All the DIP components are optional if you want to order core-board version of CB0909, such as DC Jack, IR module, SATA5V, SATA DATA connector, NIC, USB A connector, 32768Hz crystal, 25MHz crystal, 4 pin 2.54mm pinheader for UART.

Below is some photos for pins and nets name list maybe useful.
